Experience

Project course in software development, Westermo, Fullstack nov. 2021 – jan. 2022

- Worked together with the team to build a web app for managing risk in their different software projects.
- Developed 3 Docker containers as the software architecture (frontend, api, server).
- 1 week (out of 8) to complete the design, 3 revisions in total with the company (concept, wireframe, hi-fi design with a design system).
- Responsible for implementing data serialization with TypeScript and connecting the API with the frontend. Data was stored locally with the help of Vuex to optimize performance.
- Responsible for communication between our team and the client, organizing a total of 5 meetings with the client.
- Responsible for implementing 5 out of 6 pages on the web app, including the CRUD for “projects” and “teams”. Discussed with the client to use Vue instead of React.

Education

Mälardalen University

Västerås, Västmanland

Degree of Bachelor of Science in Computer Science

Skills

Software

Git, Figma

Frameworks

Vue, React

Programming languages

Typescript, C, C#, Python, R, F#, Dart, HTML, CSS, SQL
